

Towards a Unified Dunwoody Presentation Theme

Let's graduate from other slides!

Author: Joshua Lupp

Dunwoody College of Technology

YYYY/MM/DD

1. Introduction
2. Code Blocks
3. Mathematical Formulas
4. Figures

- Marp is software for creating **slides** using **Markdown**.
 - Basic Markdown syntax is supported.
- You can move to the next page simply by inserting a horizontal rule `---` in Markdown.¹

1: Since Marp is developed according to the CommonMark Markdown specification, the "footnote" syntax (the one using `[^1]`), which is not part of CommonMark, is not provided. Therefore, Kaisugi implemented a pseudo-footnote by referring to [this marp discussion](#).

```
console.log("Testing!");
```

You can write code blocks like this.

```
@app.route('/members/view/<int:id>')
def view_member(id):
    member = Members.query.get_or_404(id)
    memberships = Memberships.query.all()
    return render_template('view_member.html', member=member, memberships=memberships)
```

The width is automatically adjusted (refer to [Auto-scaling](#) in the documentation).

$$I_{xx} = \int \int_R y^2 f(x, y) \cdot dy dx$$

$$f(x) = \int_{-\infty}^{\infty} \hat{f}(\xi) e^{2\pi i \xi x} d\xi$$

You can write mathematical formulas like this. Of course, inline *L^AT_EX* is also available.

You can also use emojis: 😊

1. First, download the image (`Dunwoody1452-1-1.jpg`) from [this Dunwoody College of Technology link](#) by right-clicking.
2. Create a directory named `images` in the same directory as this Markdown file, and place the downloaded image there. Now you're all set.
